

BALIK - TRANSPORTCONTAINER

Rear view

Material: rack ST37 painted, inside- and outside container stainless steel 1.4301
Dimensions: length/width/height: 3200/2100/2145 mm
Container contents: 2 times 2300 litres (double container)
Container heating: electrical heating mats with 5 KW per singles container, 400 V, 50 Hz
1 piece switchbox: with main switch, FI-protectors, temperature control device
Insulation: Perlite-insulation between inside- and outside container

By the electrical heating of the containers the product can be taken fast to the required temperature after the delivery to the customer. The good quality of heat insulation ensures a low temperature drop per transport time unit.

The container can be attached to a further processing system and sent back for re-filling.
